

Rising 8th Grade Summer Math Directions

Every incoming 8th grader (including those who are going to high school math) is expected to complete the IXL skills from the list of skills found under “My Dashboard,” and then “From Your Teacher” to at least 90%. These skills are also highlighted on the 7th grade menu page.

The skills can be completed at your own pace and in any order. Ideally, it would be spread out across the summer. If help is needed on a particular skill, IXL provides help videos. If you don't complete this assignment over the summer, full credit will not be given and you may have to continue working on it during recess once school resumes in August.

This is a 20 point assignment and will be your first math grade in 8th grade. If you will be taking math at the high schools, the grade will count under science. You may earn extra credit for reaching 100% mastery on the majority of the skills and more extra credit if you achieve 100% mastery on all of the suggested skills. If you already have 90% - 100%, you must still complete a few problems to reclaim that score. Do not skip over skills just because you may have reached the goal earlier in the 7th grade.

Due Date: Friday, August 14th

Please reach out to Ms. Donelan if you have any questions.

Have a wonderful summer!!
